this edited volume consolidates research from 32 countries in order to address the implications of the recent global wave of migration on educational opportunity and assess links between migration and bullying in europe and further afield using data gathered from the european commission funded tribes project transnational collaboration on bullying migration and integration at school level chapters cover first hand accounts policy document analysis and lived experience through comparative themes such as school climate governmental policy diversity and inclusion technology student voice and school design to demonstrate how bullying can be understood as a threat to developing inclusive and diverse schools and societies globally rooted in a bio ecological model that recognizes the intersectionality of migrant lives ultimately this book will advance collaboration between stakeholders to ensure better integration a reduction in bullying and better safety and well being for refugee and migrant students reflecting the truly cross disciplinary cross cultural and intersectional nature of the volume this book will be of interest to researchers scholars and postgraduate students in migration and education studies bullying and cyberbullying and the sociology of education policymakers and practitioners in psychology technology and youth studies more broadly will also benefit from this book

the subjectivities and politics of occupational risk links restructuring in three industries to shifts in risk subjectivities and politics both within workplaces and within the safety management and regulative spheres often leading to conflict and changes in law political discourses and management approaches the state and corporate governance emphasis on worker participation and worker rights internal responsibility and self regulative technologies are understood as corporate and state efforts to reconstruct control and responsibility for occupational health and safety ohs risks within the context of a globalized neoliberal economy part 1 presents a conceptual framework for understanding the subjective bases of worker responses to health and safety hazards using bourdieu s concept of habitus and the sociology of risk concepts of trust and uncertainty part 2 demonstrates the restructuring arguments using three different industry case studies of multiple mines farms and auto parts plants the final chapter draws out the implications of the evidence and theory for social change and presents several recommendations for a more worker centred politics of health and safety the book will appeal to social scientists interested in health and safety work employment relations and labour law as well as worker advocates and activists

economists typically default to the assumption that cash is always preferable to an in kind transfer we extend the classic southworth 1945 framework to predict under what conditions this assumption holds we take the model to longitudinal household data from ethiopia where a large scale social safety net intervention the productive safety net programme psnp operates even though most psnp payments are paid in cash and even though the temporal transaction costs associated with food payments are higher than payments received as cash the overwhelming majority of the beneficiary households prefer their payments only or partly in food however these preferences are neither homogeneous nor stable higher food prices induce shifts in preferences towards in kind transfers but more food secure households and those closer to food markets and to financial services prefer cash there is suggestive evidence that preferences for food are also driven by self control concerns

basic road safety manual for transportation engineers provides an introduction to the road safety field and describes the safety analysis process the relationship between components of the road and safety and the steps required to complete technical studies sight distances spot speed etc

rethinking transportation design operation and regulation too often transportation systems fail the very people they are meant to serve although engineers and policymakers design systems based on industry standards real world users drivers cyclists and pedestrians face hazards that are often overlooked from poorly maintained winter roads to a misalignment in expected versus actual usage due to human factors these oversights put lives at risk forensic transportation engineer robert gilchrist evaluates conventional thinking in transportation engineering through a human lens by discussing the disconnect between industry standards and real world conditions he encourages a user centric approach one that considers human factors environmental challenges and the true cost of system failures through case studies regulation analysis and expert insights he challenges current practice and supports an adjustment of baseline thinking to improve safety and decision making with decades of experience investigating transportation failures gilchrist provides a compelling accessible guide for engineers policymakers lawyers and system users alike to inspire safer smarter transportation systems

there has long been concern that cash and in kind transfers might affect prices in developing country food markets while there have been a number of studies at highly aggregated levels much less is known about the effects of cash transfers on local food prices and even less about how they compare to food transfers we consider this issue in the context of a large social protection intervention ethiopia s productive safety net programme using 12 months of price data from 233 localities and controlling for temporal location and market characteristics we find cash transfers have no effect on food prices there is some evidence that food transfers reduce food prices maize transfers reduce aggregate grain prices wheat transfers reduce the price of maize and the negative effect of food transfers on food prices is larger in more remote markets however the magnitudes of these effects are trivially small both in absolute and percentage terms
