technologiemanagement language english abstract the purpose of this thesis is to examine
the application of sustainable supply chain management sscm in the growing industry of
consumer electronics the research intends to look for patterns in respect to the
implementation of sscm programs within selected consumer electronics focused businesses
using a case study analysis the aim of this paper is to investigate which concepts of
implementation and design of sscm are available in the consumer electronics industry and
to analyze how they can be classified the primary sources for the main analysis of this paper
are the sustainability reports from the four companies dell philips samsung and sony these
companies were selected based on their location size and ranking within the industry and
the method of selection is explained herein following a first look at the data a process
oriented approach was chosen for the study and a careful analysis leads to the formation of a
model describing the process of achieving supply chain sustainability in the consumer
electronics industry the sustainability achievement process comprises eight phases 1
acknowledgement 2 vision and strategy 3 communication 4 assessment 5 goal setting 6 goal
achievement 7 expanding the reach and 8 maintaining the success the model is refined and
substantiated in the subsequent cross case analysis by illustrating the distinctive features of
each phase within each company furthermore the author identifies indicators and
keywords for every phase which permit the unambiguous association of statements to
levels of sustainability achievement for easy classification critical cases are recognized
examined and solved during the research in order to provide a framework for a real world
application overall the derived model provides the foundation for the evaluation of a

series of case studies serves to illustrate how a mechatronic approach has been used to
achieve enhanced performance through the transfer of functionality from the mechanical
domain to electronics and software mechatronics in action not only provides readers with

access to a range of case studies and the experts view of these but also offers case studies in course design and development to support tutors in making the best and most effective use of the technical coverage provided it provides in an easily accessible form a means of increasing the understanding of the mechatronic concept while giving both students and tutors substantial technical insight into how this concept has been developed and used
