this ground breaking book identifies the role of nursing in the healing process written from a practice perspective the text provides a firm foundation for students in understanding what nursing is i would encourage all nurses in any speciality to read this class text nursing times

this text presents a totally nursing focused framework for teaching and learning nursing pharmacology and places the patient at the center of all drug administration decisions and considerations the book presents core drug knowledge using prototypes of different drug classes and emphasizes core patient variables that influence the patient's response to therapy this thoroughly updated third edition covers newly approved drugs has separate chapters on drugs affecting fungal and viral

infections and includes more pathophysiology information fda black box warnings have been added to the discussion of each prototype when applicable and safety alerts have been added to emphasize prevention of common medication errors a companion website offers student and instructor ancillaries including nclex style questions pathophysiology animations medication administration videos and dosage calculation quizzes

over the past 20years nursing has begun to rediscover some of its basic truths which have become obscured because of the rise in technology and medical knowledge this century one of these basic truths is the concern of this book that intelligent sensitive nursing does make a difference to the consumers of health care like most essential truths this seems almost too obvious to be stated nevertheless many nurses have become increasingly aware of a commonly held view that getting better or staying healthy is largely dependent upon the intervention of or monitoring by medical practitioners and paramedical therapists together with the technology they use and that nurses merely carry out the orders of such workers and keep things in order an apt analogy frequently used is that of the air journey the point of the journey is to get from a to b and is largely dependent upon the aeroplane i e the technology in health care and the crew in the cockpit i e

therapeutic nursing is an inspiring read and is of immense use to those who teach and supervise nurses at all levels gaining self awareness is a vital aspect of professional development for all who work in the caring professions in nursing especially the ability to evaluate oneself affects all areas of practice including direct patient care working relationships with colleagues and maintaining one's own well being in the often pressured environment of health care

chapters discuss therapeutic dimensions of nursing humanistic approaches nurse patient interactions

the behavioural approach in nursing practice is the main concern of this book originally published in 1982 although the discussion concentrates on the fields of psychiatry and learning disabilities it is also relevant to other areas of nursing such as the care of the elderly or of sick children the book traces the development of behaviour therapy from its beginnings in the experimental laboratory work of pavlov skinner and watson to the more recent influences of social learning theory a survey is made of the major stages in the therapy process and this is followed by a detailed description of possible types of treatment in conclusion some of the more controversial issues raised in this book are reconsidered along with their implications

this book originally published in 1985 is intended to complement philip barker's previous book behaviour therapy nursing the latter focussed more on the principles of the behavioural approach to nursing while this book adopts a more practical approach it is also shown that the proposed model can be extended beyond psychiatric

and learning disabilities into general nursing in the first part of the book the range of settings in which various therapeutic approaches can be used is set out including work in the community emphasis is also given to the nurse's role in social skills training and in the development of everyday living skills for the rehabilitation of the mentally ill and disabled the second part of the book presents case studies each describing how the nurse assesses the patient and plans and implements the treatment the emphasis is on practical illustration of the behavioural approach to different clinical problems in different patient populations in various treatment settings at the end of each study there is discussion of possible alternative treatment strategies and the general applicability of the case

first published in 1997 this volume responds to the rapidly developing fields of nursing and health care fields and explores the meaning of nursing and the nurse patient relationship through looking at the effects of a nurse's personality approach and understanding as being therapeutic for the patient's experience steven j ersser explores areas including the concept of nursing as therapy the presence of nurses and the effect of nursing on patient outcome his book is part of a new series of monographs offering up to date reports of recently completed research projects in the fields of nursing and health care the aim of the series is to report studies that have relevance to contemporary nursing and health care practice it will include reports of research into aspects of clinical nursing care management and education this book along with the series will be of interest to all nurses and health care workers researchers managers and educators in the field
