robert lanza is one of the most respected scientists in the world a us news world report cover story called him a genius and a renegade thinker even likening him to einstein lanza has teamed with bob berman the most widely read astronomer in the world to produce biocentrism a revolutionary new view of the universe every now and then a simple yet radical idea shakes the very foundations of knowledge the startling discovery that the world was not flat challenged and ultimately changed the way people perceived themselves and their relationship with the world for most humans of the 15th century the notion of

earth as ball of rock was nonsense the whole of western natural philosophy is undergoing a sea change again increasingly being forced upon us by the experimental findings of quantum theory and at the same time towards doubt and uncertainty in the physical explanations of the universe's genesis and structure biocentrism completes this shift in worldview turning the planet upside down again with the revolutionary view that life creates the universe instead of the other way around in this paradigm life is not an accidental byproduct of the laws of physics biocentrism takes the reader on a seemingly improbable but ultimately inescapable journey through a foreign universe our own from the viewpoints of an acclaimed biologist and a leading astronomer switching perspective from physics to biology unlocks the cages in which western science has unwittingly managed to confine itself biocentrism will shatter the reader's ideas of life time and space and even death at the same time it will release us from the dull worldview of life being merely the activity of an admixture of carbon and a few other elements it suggests the exhilarating possibility that life is fundamentally immortal the 21st century is predicted to be the century of biology a shift from the previous century dominated by physics it seems fitting then to begin the century by turning the universe outside in and unifying the foundations of science with a simple idea discovered by one of the leading life scientists of our age biocentrism awakens in readers a new sense of possibility and is full of so many shocking new perspectives that the reader will never see reality the same way again

biocentrism shocked the world with a radical rethinking of the nature of reality but that was just the beginning in beyond biocentrism acclaimed biologist robert lanza one of time magazine's 100 most influential people in 2014 and leading astronomer bob berman take the reader on an intellectual thrill ride as they re-examine everything we thought we knew about life death the universe and the nature of reality itself the first step is acknowledging that our existing model of reality is looking increasingly creaky in the face of recent scientific discoveries science tells us with some precision that the universe is 26.8 percent dark matter 68.3 percent dark energy and only 4.9 percent ordinary matter but must confess that it doesn't really know what dark matter is and knows even less about dark energy science is increasingly pointing toward an infinite universe but has no ability to explain what that really means concepts such as time space and even causality are increasingly being demonstrated as meaningless all of science is based on information passing through our consciousness but science hasn't the foggiest idea what consciousness is and it can't explain the linkage between subatomic states and observation by conscious observers science describes life as a random occurrence in a dead universe but has no real understanding of how life began or why the universe appears to be exquisitely designed for the emergence of life the biocentrism theory isn't a rejection of science quite the opposite biocentrism challenges us to fully accept the implications of the latest scientific

findings in fields ranging from plant biology and cosmology to quantum entanglement and consciousness by listening to what the science is telling us it becomes increasingly clear that life and consciousness are fundamental to any true understanding of the universe this forces a fundamental rethinking of everything we thought we knew about life death and our place in the universe

he aquí un libro en que algunos autores célebres examinan la aparente decadencia del mundo y quieren estimularnos a despertar de nuestra inercia ante cosas tales como el cambio climático la injusticia y sobre todo la inconsciencia dice naranjo en su introducción cómo caracterizar la mentalidad de eso que a veces se llamó la nueva era a veces la revolución de la consciencia o la contracultura primero se asoció con los beatniks de california luego con los hippies y por último se volvió un movimiento masivo de extraordinaria productividad de la cual derivaron nuevas formas de psicoterapia y de búsqueda espiritual así como movimientos políticos una nueva ola de feminismo la ecología y el rock roll podemos decir que en los años 60 con la aparición de la contracultura emergió un sentir colectivo que implicaba la des idealización de la civilización misma lászlo nos dice que estamos llegando a un punto de bifurcación y boff se pregunta si estamos condenados a sufrir y a ser testigos de nuestra propia destrucción o todavía podemos corregir el rumbo y concluye que para salir de esta dramática situación tenemos que reinventarnos como especie necesitamos una nueva sabiduría que nos lleve a una profunda liberación y transformación personal es de esperar que el efecto coral de tantos pensadores reconocidos pueda sacarnos de la negación resignada y de nuestra impotencia colectiva y que pueda facilitar la transición a esa era de la consciencia que reemplace la actual política de la inconsciencia y del engaño
